Lorenzo Repetto

La Plata, Buenos Aires, Argentina

Senior Backend Developer & Technical Coordinator

lorenzorepetto28@gmail.com +54 9 2221-411872 linkedin.com/in/lorenzorepetto

github.com/lorenzorepetto

PROFESSIONAL SUMMARY

Senior Backend Developer with over 6 years of experience focused on software architecture, microservices, and distributed systems. Specialized in backend engineering with solid full-stack versatility. Driven by solving complex technical challenges, building scalable systems, and writing maintainable code. In addition to hands-on development, experienced in leading technical projects and coordinating initiatives across teams. Constantly expanding knowledge through technical literature, personal projects, and academic studies. Holds a degree as Analista Programador Universitario from UNLP, currently completing thesis for a Bachelor's degree in Information Systems.

AREAS OF EXPERTISE

Architecture & Development: Java (Spring Boot), Python (Data pipelines, Airflow, Pandas), TypeScript / JS (React, Next.js, Angular), Flutter, Microservices, Event-Driven, REST/GraphQL, communication protocols (HTTP, gRPC, WebSockets), Clean Architecture, SOLID, Design Patterns, SQL & NoSQL databases (relational, document-oriented, cache).

Cloud, Infrastructure & Observability: AWS (Fargate, Lambda, API Gateway, RDS, ElastiCache, S3), Firebase, Docker, Kubernetes, Terraform, GitHub Actions, GitLab CI/CD, Datadog, New Relic.

Technical Coordination & Methodologies: Technical initiative coordination, SCRUM / Kanban, GitFlow, Spec-Driven Development (SDD), product & engineering alignment.

PROFESSIONAL EXPERIENCE

Senior Java Developer & Coordinator · BetWarrior (Product) 08/2024 – Present

- Technical coordination of a 5-engineer development cell (3 Backend, 2 Frontend), streamlining backlog prioritization, product alignment, and continuous value delivery.
- Architecture and development of an in-house, **multi-country (Argentina & Brazil) and multi-brand Onboarding and KYC engine** in Java 17+, decoupling business operations from rigid vendors and enabling dynamic validation flows per region.
- Implementation of resilience and decoupling mechanisms against third-party services using fault tolerance patterns, distributed tracing (correlation IDs), and distributed caching in **AWS ElastiCache**.
- Large-scale migration of active user base and biometric data to new identity providers, orchestrating secure data pipelines and asynchronous cron jobs with zero downtime.
- Redesign of corporate Backoffice authorization architecture into a granular, multi-tenant Role-Based Access Control (RBAC) model for segmented and secure access control.
- Adoption and team enablement of **Spec-Driven Development (SDD)** methodologies assisted by AI tools, optimizing technical design stages and accelerating delivery cycles.

Software Engineer · **Inviu** (Digital Ops) 11/2022 – 12/2023

- Design and development of end-to-end automation solutions for trading desk financial and operational workflows, collaborating closely with business stakeholders.
- Creation and integration of a real-time data ingestion pipeline using **Apache Airflow (Python)**, consuming BYMA (SDIB) REST APIs with pointer correlation logic.
- Process optimization: reduced order processing interval **from 1 hour to 3 minutes** and script execution time **from 4 minutes to under 1 minute** via persistent TCP connections.
- Development of an internal admin dashboard using Next.js and Appsmith for autonomous data monitoring and reprocessing by operations.

Ssr Backend Developer · **Ualá** (Product Engineering - Loans) 07/2022 – 11/2022

- Active participation in the cross-functional engineering squad for the Mexican market Loans product launch.
- Design and implementation of the **Backend for Frontend (BFF)** and orchestration layer using AWS Lambda functions (Java 11), API Gateway, DynamoDB, and AppSync (GraphQL), improving mobile loading latency.
- Development of infrastructure as code using **Terraform and Terragrunt** under a modular DRY approach, accelerating environment provisioning times to minutes.

Ssr Software Engineer (Backend) · **Mercado Libre** (Depto FBI - Accounting) 02/2021 – 07/2022

- Backend development within the core Accounting team with end-to-end initiative ownership and multi-country production rollouts, supporting workloads of up to **10k RPM**.
- Migration and redesign of a legacy system ("Ratably" in Kotlin/MySQL) to an event-driven modular microservice with **Java 11, Spring Boot, and Clean Architecture**, eliminating daily table recreation overhead.
- Planning and execution of a country-by-country progressive rollout strategy, ensuring zero transactional data loss and achieving an exceptional performance rating of **5/5** for the Quarter.
- Technical ownership and maintenance of the critical billing service `fbi-receipts`, managing on-call rotations, alerts, and monitoring dashboards in Datadog and New Relic.

Fullstack Developer · **Technisys** (Client: Banco Falabella Peru) 08/2020 – 02/2021

- Lead frontend development for the end-to-end delivery of a corporate banking web application (B2B) for Banco Falabella Peru business clients, building the interface in **Angular 9**.
- Co-design and integration of transactional APIs in **Java and Spring Boot** for secure core banking communications.
- Microservice containerization with Docker and Helm chart configuration for Kubernetes orchestration using GitLab CI/CD.

Software Developer · **Grupo Mercel** (Client: Swiss Medical) 04/2020 – 08/2020

- Development of enterprise backend integrations using Java, Apache Camel, and JBoss Fuse connecting healthcare systems with Sybase databases.
- Development of mobile interfaces and modules using React Native and Redux for healthcare service management applications.

EDUCATION

Bachelor's Degree in Computer Systems 2017 – Present
School of Informatics · UNLP
97% (Thesis in progress) · GPA: 8.18 / 10

Associate Degree in Systems Analysis 2017 – 2021
School of Informatics · UNLP
Completed · GPA: 8.12 / 10

LANGUAGES

Spanish: Native

English: Professional Technical Working Proficiency
